## Demand/Resuscitator Valve

The LSP Demand/Resuscitator Valve is designed to provide 100% oxygen to a breathing or non-breathing patient in an emergency situation. The valve is designed for use with a mask, endotracheal tube, or tracheotomy tube.

The Demand Resuscitation Valve complies with AHA guidelines recommending that 100% oxygen be given to victims of a heart attack and/or smoke inhalation. The valve can be used in conjunction with a portable oxygen cylinder equipped with a pressure regulator or with a central oxygen source. The valve operates on a regulated oxygen supply of 40-60 psig (275 to 413 kPa) and reduces this pressure to a physiologically acceptable level with a pressure limit of  $60\pm5$  cm H<sub>2</sub>O. This prevents excessive buildup of intrapulmonary pressures and over-inflation of the lungs.

The slight negative pressure created by a spontaneously breathing patient's inspiratory effort triggers the valve from a non-flow state to a flowing state. The greater the inspiratory effort, the higher the flow. When the inspiratory effort stops, the flow stops. The non-breathing valve permits it to be used as a resuscitator in combination with a manually operated button located on top of the valve.

The Demand/Resuscitator Valve provides an accurate constant flow rate of 40 lpm to help prevent gastric inflation, as recommended by the AHA. It is also available with a minimum flow rate setting of 160 lpm.

## **Key Features**

- Maximum cylinder use ... flow rate of 40 lpm is maintained at cylinder pressures between 500-2200 psig (3447 to 15168 kPa), allowing for complete use of cylinder contents
- Easy to clean and service ... valve obstruction may be removed during resuscitation with minimal interruption; valve may also be chemically disinfected
- Compact, lightweight and durable ... will withstand corrosive materials and harsh weather conditions

## Demand/Resuscitator Valve

## **SPECIFICATIONS**

40 lpm Flow Rate (restricted flow): As required in demand mode, 0-40 lpm at 50 psig (344 kPa); in resuscitation mode, a constant flow of 40 lpm at 50 psig (344 kPa) 160 lpm Flow Rate: As required in demand mode, 0-160 lpm at 40 psig (275 kPa); in resuscitation mode, a constant flow of 160 lpm at 40 psig (275 kPa) **Delivery Pressure:**  $60\pm5$  cm H<sub>2</sub>O unless otherwise indicated on the demand valve **Crack Pressure:** 0 to  $-2 \text{ cm } H_2O$  (0 to  $-8 \text{ in. } H_2O$ ) Exhalation Resistance: LPM  $cm H_2O$  (maximum) 0-10 1.5 11-70 3.8 71-160 6.4 **Dead Space:** 8 ml (excluding mask) Supply Pressure: 40 to 60 psig (275 to 413 kPa) **Operating Temperature:** -30° F to 125° F (-34.4 C to 51.7 C) **Storage Temperature:** -40° F to 160° F (-40 C to 71.1 C) Inlet Fitting: standard 1male oxygen DISS Filter: 25 micron wire mesh **Outlet:** 22 mm outside diameter x 15 mm inside diameter Materials: body - anodized aluminum; cover - polycarbonate; outlet - polysulfone; inlet fitting - plated brass ORDERING INFORMATION

L063R	Demand/Resuscitator Valve, with 6' (1.8 m) oxygen hose, 40 lpm flow rate
L063-03R	Demand/Resuscitator Valve, with 6' (1.8 m) oxygen hose, adult cuffed mask, 40 lpm flow rate
L063-05R	Demand/Resuscitator Valve, 40 lpm flow rate
L063	Demand/Resuscitator Valve, with 6' (1.8 m) oxygen hose, 160 lpm flow rate
L063-030	Demand/Resuscitator Valve, with 6' (1.8 m) oxygen hose, adult cuffed mask, 160 lpm flow rate
L063-050	Demand/Resuscitator Valve, 160 lpm flow rate
L099-004	Adult Cuffed Mask, reusable, size 4
L099-005	Adult Cuffed Mask, reusable, large, size 5
L535026	Oxygen Hose, 6' (1.9 m), with DISS fittings
