## Description

All ball valves are factory cleaned for oxygen service and conform to NFPA 99 standards. Each 1/2" to 4" valve consists of Teflon seats and adjustable stem packing gland with a Teflon stem seal.

1/2" to 2-1/2" valves are rated at 600 psig. 3" and 4" valves are rated at 400 psig. All valves are rated for full vacuum (29.9" Hg). Valves go from full ON to full OFF by turning the vinyl-gripped valve handle 90°. Locking-type handles may be ordered separately when required. Copper tubing is factory installed to help prevent valve seat damage during soldering. Main and riser valves are not required to be installed in a box unless specifically noted or required.
