

First Responder Kit

The **LSP First Responder Kit** was developed for the prepared EMT to keep in his/her personal vehicle should they be the first to arrive at an emergency scene.

Each kit comes complete with an aluminum cylinder, oxygen regulator, nasal cannula, and a disposable manual resuscitator ... all conveniently packed in a durable carry bag with a storage compartment and adjustable shoulder strap.

Although the kit is designed to provide a low-cost application for multiple placements, all the components are manufactured to high quality standards to meet the requirements of the EMS environment.

If you're the first on the scene, you can respond with confidence with the LSP First Responder Kit.
